

On April 17, 2013, Jacobs Technology (Jacobs) awarded MEC^x a Small Business Award for facility modification projects. MEC^x was selected from a group of over 400 contractors for this recognition. MEC^x received the award for successfully completing multiple complex facility modifications at NASA's Johnson Space Center (JSC) in Houston, Texas under Jacob's Engineering and Science Contract (ESC).

MEC^x was recognized for elite management and planning capabilities during the execution of the complex work. The completed projects included environmental, mechanical and electrical contractor services in a variety of facilities at JSC used to support NASA JSC's mission of expanding the human presence in space through exploration and utilization for the benefit of all.

With safety as a first priority, MEC^x has completed the rigorous projects while assuring NASA satisfaction and quality demands.
